SUMMARY

Results-driven Software Engineer and Full-Stack MERN Developer with hands-on experience building secure, scalable web applications. Proficient in Node.js, Express.js, React.js, and MongoDB with strong command of RESTful API design, JWT authentication, and role-based access control. Experienced in both frontend and backend development, database management (MongoDB, MySQL, Oracle, PostgreSQL), and cloud deployment (Vercel, Render, AWS basics). Passionate about writing clean, maintainable code and continuously upgrading skills to deliver production-quality solutions.

LIVE PROJECTS LINKS

TECHNICAL SKILLS

Frontend

- React.js, HTML5, CSS3, JavaScript (ES6+), Tailwind CSS, Vite, TypeScript (basic)

Language

- JavaScript, PHP, C++, Python, SQL

Tools

- Git, GitHub, Postman, VS Code, Web Speech API

CS Fundamentals

- Data Structures, OOP, Networking Basics, Cybersecurity Concepts

Backend

- Node.js, Express.js, RESTful APIs, JWT Authentication, MVC Architecture, Multer, Cloudinary

Database

- MongoDB, MongoDB Atlas, MySQL, Oracle Database, PostgreSQL, Sequelize ORM, Mongoose

Cloud/DevOps

- Vercel, Render, AWS (basics – S3, EC2), VirtualBox, Linux (Ubuntu, Kali Linux – basic), CI/CD Pipelines

Security

- JWT, Role-Based Access Control, DDoS Defense concepts, Rate Limiting, Kali Linux (basic)

WORK EXPERIENCE

Full Stack Developer

University of Sargodha | August 2025 - May 2026

- Designed and developed full-stack web applications using React.js, Node.js, Express.js, MongoDB, and PostgreSQL, taking each from database schema to production deployment.
- Built and deployed Billing and Sales Management System (billing-and-sales-management-system.vercel.app) and Mobile Shop E-Commerce Platform (ecommerce-website-project-h3qs.vercel.app) — both live, with secure authentication, product/inventory management, and end-to-end business workflows.
- Engineered RESTful APIs secured with JWT authentication and Role-Based Access Control (RBAC); integrated Cloudinary for scalable file/image uploads.
- Containerized applications with Docker and managed relational data integration using PostgreSQL, enabling consistent environments across development and deployment.
- Deployed frontend and backend separately on Vercel and Render, optimizing load performance, responsiveness, and overall user experience.

Backend Developer

CodeAlpha | Jun 2025 - August 2025

- Accomplished secure user authentication across 4 backend modules as measured by zero unauthorized access incidents in testing by implementing JWT-based auth, session/cookie handling, and role-based access control (RBAC).
- Accomplished faster feature delivery by completing full CRUD operations for a Student Data Management System through building RESTful APIs with Node.js, Express.js, and MongoDB.
- Accomplished reliable file handling for a production module by engineering a Multer + Cloudinary file upload pipeline with error handling and validation.
- Accomplished hands-on delivery of 4 distinct applications (mobile site clone, task manager, AI voice assistant, file upload module) as measured by all 4 shipped within the internship timeline by independently designing, coding, and testing each using Node.js and Express.js.

Backend Developer

Backend Developer Intern | NeuroFive Solutions — July 2026

- Delivered a full-stack System Health & Incident Monitoring Dashboard by building real-time uptime and incident tracking with Node.js, Express, MongoDB, and Socket.io
- Built a complete Expense Tracker API by implementing JWT authentication, role-based access control, and centralized error handling with Express 5 and Mongoose
- Ensured reliable file handling by integrating Multer + Cloudinary uploads with validation and error handling
- Verified API reliability by writing automated tests using Jest + Supertest with mongodb-memory-server

PROJECTS

DDoS Attack Simulation & Defense System

Node.js · Express.js · Python · Kali Linux · Ubuntu · VirtualBox

- Accomplished improved server resilience against traffic-based attacks as measured by successfully blocking simulated UDP flood attacks in an isolated test lab by developing a Node.js/Express defense layer with real-time rate limiting and IP blocking.
- Built an isolated lab environment using VirtualBox with Kali Linux (attacker) and Ubuntu (victim/defender) VMs to safely simulate real-world attack traffic

AI Voice Assistant

Node.js · Express.js · Web Speech API · Third-party APIs

- Built voice-controlled assistant from scratch using Web Speech API — no third-party voice SDK — integrating live weather/search APIs for real-time responses.

Expense Tracker API | [GitHub](#) | [Live Demo](#)

Node.js · Express.js · MongoDB · Mongoose · JWT · Docker · GitHub Actions · Jest · Cloudinary · Vercel

- Built a multi-user expense tracking REST API with role-based access control across 8+ protected endpoints, backed by 25+ passing automated tests
- Integrated a live currency-conversion API with in-memory caching, cutting redundant external calls by ~90%
- Hardened login/register endpoints against brute-force attacks using tiered rate limiting
- Containerized the app with Docker and automated testing via a GitHub Actions CI/CD pipeline
- Built a serverless-compatible receipt upload system (Cloudinary), fixing a local-storage limitation for production deployment

EDUCATION

Bachelor of Science in Information Technology

August 2022 – May 2026

University of Sargodha

Final CGPA: 3.23

CERTIFICATES AND TRAINING

- MERN Stack Development – Full-stack JavaScript development certificate
- Git & Bash – Version control and command-line tools
- MongoDB – Database management, aggregation pipelines & queries
- Python Programming – Fundamentals and advanced concepts
- Cybersecurity Fundamentals – DDoS defense, ethical hacking basics (Nmap, Wireshark, Burp Suite)
